

Professional and Retail Products

There is growing opportunity for spas, wellness centers, esthetic and medical offices to add specialized treatments and products to the list of services, for health-challenged clients. These clients want to experience the same sense of relaxation and skin care attention that any client would desire.

Along with retail products, TecNiche Therapies® develops treatment products and protocols for licensed professionals. Some health-challenges, such as cancer, require special training for the esthetic treatment of these clients.

Product Facts:

- * Dermatologist Tested

Why TecNiche Therapies® Skin Care Products?

TecNiche Therapies® products are specifically designed for **HEALTH-CHALLENGED SKIN®**. Medical treatments and medications can deplete

the skin of essential nutrients, leaving it dry and irritated, as well as debilitating vital functions of collagen production, cell regeneration and repair. The key innovation with TecNiche Therapies® products, is that they are balanced to comfort fragile skin, while gently introducing Cosmeceutical ingredients to strengthen and revitalize the skin. All products are formulated with natural, organic and green ingredients which are compatible with stressed skin. Most of the products have no added scent, unless vital to the function of the product.

The growing demographic of individuals dealing with health issues – such as cancer, diabetes, neuropathy, autoimmune disorders, sensory impairments, and hormone changes – requires specialized skin care products.

TecNiche Therapies® Products
